

SOLAR HOT WATER SYSTEMS

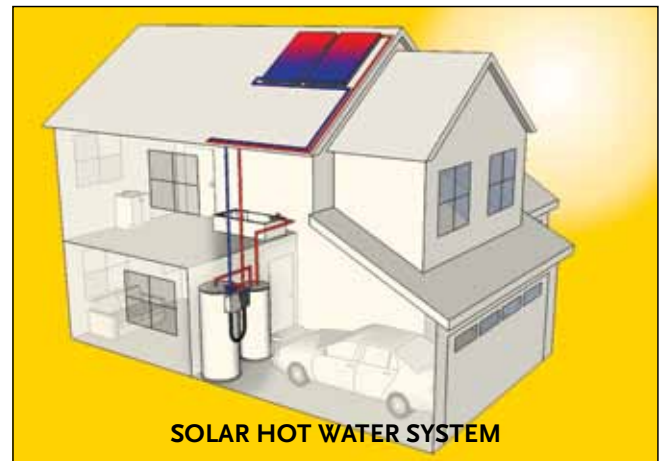

groSolar offers clean, sustainable energy solutions which help reduce your impact on the environment while saving you money. Reliable solar hot water systems reduce your energy use, providing independence from traditional heating sources. Domestic hot water is the second highest energy cost in a typical household. A solar hot water production system can provide enough energy to meet approximately 70% of your domestic hot water needs, even in cold climates. In addition to saving you money, groSolar's solar hot water systems also help reduce your reliance on imported fossil fuel and electricity, helping to beat climate change.

TODAY'S SOLAR HOT WATER SYSTEMS ARE...

RELIABLE: Systems are designed to provide hot water using the clean and safe power of the sun first, and other fuel sources as a backup.

AFFORDABLE: Tax credits and state incentives reduce your cost, making solar hot water affordable everywhere.

AESTHETIC: Looks great on almost any home or business. Businesses can integrate onto any type of roof.

SOLAR HOT WATER SYSTEMS

TODAY'S SOLAR HOT WATER SYSTEMS ARE...

ECONOMICAL: A typical system will reduce fuel use by as much as 70%, saving you money. You'll save money, while protecting our environment, for the entire 20+ year life of the system!

ECOLOGICAL: Fossil fuel and electric water heating pollutes the air. Solar water heaters consume no fossil fuels, making your home safer and your planet cleaner. Converting to solar hot water is equal to not driving 15,000 miles each year. Think what you will save by switching to solar!

SOCIALLY RESPONSIBLE: Reduced dependence on fossil fuels means reduced dependence on foreign energy sources. Solar puts your money where you want it.

RENEWABLE: The sun rises every day, and provides clean, safe, reliable energy. Renewable energy has a fixed cost; the sun rises, not the price of the sun!

SIMPLE: Everything you need is one phone call away. Expert installation. The right equipment for your home, your family and our planet.

groSolar offers pre-engineered, cost-effective and simple systems to work with your existing hot water system.
