

What the World Needs. **NOW**

System:

58 kW Ground Mount PV

System Components:

308 Evergreen 190's

1 Solectria 60 kW Inverter

Farm-Way

Farm-Way is a well-known Vermont retailer and now produces nearly half of its power from solar electricity.

An initial project cost of \$450,000 was reduced by \$226,000 with a grant from the Vermont Clean Energy Development Fund. Farm-Way will produce approximately 43% of their electric power from the solar installation and save nearly \$14,000 on their electric bills annually. Break-even is expected within 10 years.

“It is not just about the economics: becoming more environmentally sensitive is compatible with our core beliefs in enjoying nature and minimizing negative impacts on natural systems,” said Skip Metayer, Vice President of Farm-Way.

The 58 kilowatt ground mounted array is located in a field adjacent to the facility which leaves room for future solar expansion.
